

## More Water for Lake Boga

An additional 2,500 ML has been delivered to Lake Boga since flows commenced on 29 April. The water was made available as a result of a significant unexpected drop in customer orders due to rain, compared with what was assumed in the 10 day order travel time from Hume Dam.

G-MW will continue to deliver water into Lake Boga at approximately 200ML/d as a result of this event; but delivery will be subject to irrigation demand and may decrease or increase accordingly over the next few days.

A further 3,000 ML currently stored in the Little Murray Weir Pool will be diverted to the Lake after the irrigation season ceases on 15 May. This is to lower the water level to allow essential works to be undertaken at the Weir, and also at the Lake Boga Outfall Regulator.

The community is reminded that these work sites are out of bounds to avoid risks associated with construction sites.
